Conversation Starters

How do changes in interest rates affect the company's profits?

Because many distributors finance their inventories, they're sensitive to interest rates. On average, distributors hold inventory equal to about 60 days sales. Inventories typically are larger for industrial equipment distributors, smaller for distributors of food and petroleum products. Because industry profit margins are low, financing costs have a large impact on profits. Inventory financing is often tied to the prime lending rate.

How much business has the company lost due to retailers buying directly from manufacturers?

Big retailers like Wal-Mart, Home Depot, and Costco buy much of their merchandise directly from manufacturers, bypassing distributors.

How do volatile energy prices affect the company?

Distributors that operate delivery fleets are sensitive to energy costs.

What opportunities does the company see in using the Internet to reach new markets?

Because they already stock a large inventory of products, distributors are in a strong position to sell products beyond their traditional market.

Country Snapshot

The Land

In addition to the mainland of the Australian continent, the territory of Australia is composed of the island of Tasmania and numerous other smaller islands. Much of the country consists of a heavily eroded and low-lying plateau containing poor soils. The climate is mostly arid becoming true desert in the center of the country; only the southeast and southwest corners of the country have a temperate climate. This has led to urban settlements occurring along the coasts with much of the interior being very sparsely inhabited. The Outback is a term often used to describe the interior, but locally it is used to refer to any location considered remote from the main cities.

Because much of Australia's low-lying plateau lacks fertile soil, the interior terrain is mostly uninhabited.

The Great Dividing Range is a mountain range that runs along the eastern side of Australia. The highland reaches altitudes of 1,600 meters (5,249 ft) and frequently breaks into flat grassland regions. The Great Barrier Reef, situated off the east coast, is the world's largest coral reef system, extending for over 2,000 kilometers (1,240 mi). Parts of the north of the country have a tropical climate and contain dense rainforest, contrasting sharply with the remainder of the western and central regions of the country, which become increasingly arid. In the interior, the Great Victoria Desert is so remote and uninhabited that it has historically been used as a location for aboveground nuclear weapons testing.

Cosmopolitan with an international flair, Sydney is the nation's most populous city.
